However, with the application of vectoral concepts to scalar electrocardiography, other interpretations of the 81 82 Sg pattern were advanced. This electrocardiographic pattern is not specifically the result of cristal hypertrophy, but rather a summation of the instantaneous vectors generated simultaneously throughout the heart.

The incomplete left bundle branch block is an electrocardiographic entity, having well defined criteria, yet is a frequent cause of misinterpretation. The R>L septal depolarization results in loss of the normal left ventricular q wave, being replaced by an initial r wave. On occasion, the initial r wave component may be fused on the ascending limb of the predominant left ventricular R' wave ...
