Software Effort Estimation Using Fuzzy Approach

Decomposition techniques take a divide and conquer approach. Size, Effort and Cost estimation are performed in a stepwise manner by breaking down a Project into major Functions or related Software Engineering Activities. Step 1 – Understand the scope

Presales teams need effort estimation in order to cost price custom software and project managers need it in order to allocate resources and time plan a project. Usually, software development is priced based on the person days, it requires in order to be built, multiplied by a daily person day rate. Without effort estimation pricing is impossible.
