Artificial bee colony algorithm (ABC) is such a novel technique proposed by Karaboga based on simulating the foraging behavior of honey bee swarm. The performance of ABC has already been compared to other EAs, such as GA, DE, and PSO,,,. The results show that ABC is better than or at least comparable to the other compared methods.

The artificial bee colony (ABC) algorithm is a global stochastic optimization algorithm inspired by simulating the foraging behavior of honey bees. It has been successfully applied to solve the constrained optimization problems (COPs) with a constraint handling technique (Deb's rules). However, it may also lead to premature convergence.

Abstract: - This paper presents a modified Artificial Bee Colony (ABC) algorithm for constrained problems. Original Karaboga's ABC algorithm was for unconstrained problems only and modifications for constrained problems were introduced later. The performance of this modified algorithm was examined by Karaboga.
