In part, security and governance in Hadoop require many of the same approaches seen in the traditional data management world. These include the "Three As" of security and data protection. Authorization: It is the process of determining what data, types of data or applications that user is allowed to access

Introduction to Hadoop Security - BigData Hadoop ...

Solving big data security issues with Hadoop Big data is by definition big, but a one-size-fits-all approach to security is inappropriate. The capabilities within Hadoop allow organizations to optimize security to meet user, compliance, and company requirements for all their individual data assets within the Hadoop environment.

Introduction to Hadoop Security - BMC Blogs

Hortonworks firmly believes that effective Hadoop security depends on a holistic approach. Our framework for comprehensive security revolves around five pillars: administration, authentication/ perimeter security, authorization, audit and data protection. Five pillars of enterprise security.

Solving Hadoop Security - Cloudera

With Hadoop, you're able to create, run, and test applications on the system that contain thousands of hardware nodes, and can terabytes of Big data at a time. It has a file distribution system that allows the system to keep working if one of the nodes fails. This reduces the risk of Big Data loss and major system failure, in the event a multitude of nodes are inoperative.
