Helium

Helium is the second lightest and second most abundant element in the observable universe (hydrogen is the lightest and most abundant). It is present at about 24% of the total elemental mass, which is more than 12 times the mass of all the heavier elements combined. Its abundance is similar to this in both the Sun and in Jupiter.

Helium - Wikipedia

Helium (He), chemical element, inert gas of Group 18 (noble gases) of the periodic table. The second lightest element (only hydrogen is lighter), helium is a colourless, odourless, and tasteless gas that becomes liquid at $-268.9\text{ }^{\circ}\text{C}$ ($-452\text{ }^{\circ}\text{F}$). The boiling and freezing points of helium are lower than those of any other known substance.

Helium Trampoline

Helium is the second most abundant element in the universe, but here on earth, it's rather rare. Most people guess that we extract helium from the air, but actually we dig it out of the ground. Helium can be found in certain parts of the world, notably in Texas, as a minor component in some sources of natural gas.

Helium - Element information, properties and uses ...

Helium is a noble gas, a group of nonreactive and stable gases that also include neon, argon, krypton, xenon and radon. As of 2010, it took 300,000 cubic feet of helium to float the 15 character...
